Non-Commercial Experience

Invoice system

An application for creating, editing, and deleting invoices and clients for a local company. The whole was created using the Vue 3 framework and libraries such as axios, html2canvas, jsPDF, lodash, mask, pinia, vue-router, and tailwindcss. The application allows to save the invoice in PDF format or send it in this form to an email. All data is maintained on Firestore. A NodeJs server was set up for the purpose of sending emails. Fully configurable options allow for easy and fast changes to the basic data.
